## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 09, 2006 has been entered.

### ***Election/Restrictions***

The newly submitted method claims are directed to an invention that is independent or distinct from the invention originally elected and examined for the following reasons:

- I. Claims 1-15 and 30-37, drawn to laser machine.
- II. Claims 18-29, drawn to methods of monitoring gases.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used without the instant claimed control methods including flowing gas to be analyzed into a measuring cell.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for

Art Unit: 1725

prosecution on the merits. Accordingly, claims 18-29 are withdrawn from consideration being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-15 and 30-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of USPN 6,888,853 to Jurgensen and in view of USPN 4,817,413 to Asano et al. AAPA describes (Specification, Background) well known laser processing including a CO2 laser and including control and including cutting of steel sheets. Jurgensen describes (column 20, lines 60-65) the well known beam splitter and measuring cell and describes (column 34, lines 19-22) the use of splitter mirrors. Asano et al describe (Abstract) old and well

Art Unit: 1725

known sound monitoring. The use of the sound monitor for monitoring the laser would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because it provides continuous monitoring capability for good apparatus control. The use of different species of splitting means and different pulse generating means would have been obvious as being a substitution of available known components. The instant claimed intended use of a control unit would have been obvious because the control units of the AAPA, Jurgensen, and Asano et al can be configured for a wide variety of control. Asano et al describe (column 3, lines 7-24) the use of a filter with the measuring cell.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
